

## Best Practices for Seeding Sainfoin

### Seed Setting

Sainfoin and barley flow is very similar.

Sainfoin weight is 30# per bushel

Barley weight is 48# per bushel

Sainfoin desired	Seeding setting for barley
30 lb per bushel	48
36 lb per bushel	58
40 lb per bushel	64

### Inoculant

Alternate seed and inoculant in drill box saving enough inoculant to go on the top. Stir in with a shovel or fork. The powder will filter down and go out with the seed.

### Seed depth \*very important\*

Surface to  $\frac{3}{4}$  inch max. Similar to grass or alfalfa.

### Weed control

We prefer seeding sainfoin as single crop. If/when weed control is desired, we spray weeds anytime with 6oz Round Up. (6 to 8 oz of Roundup with 10 gallons of water.) 1 gallon of chemical will treat 20 acres.
